

Fahad Khalid

Lahore, Pakistan | +92 300/315 -4343753 | fahadkhalid695@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

- Computer Science undergraduate with focus on **AI/ML, Cloud Computing, and Cybersecurity**
 - Hands-on experience building **AI-powered applications, environmental monitoring systems, and data analytics tools**
 - Skilled in **Python, C++, TensorFlow, PyTorch, AWS, Azure, GCP, and Linux/Docker**
 - Proven problem-solving through **hackathons, CTFs, and national coding competitions**
 - Strong foundation in **modern development practices and data-driven solutions**
-

Certifications

- Amazon Cloud Foundations – AWS
 - Basic Cloud Security – Google Cloud
 - App Dev using Copilot – Microsoft
 - Gemini for App Dev – Google Cloud
 - Network Technician Career Pathway – Cisco
 - Presecurity (New) - TryHackMe
 - Cybersecurity Fundamentals – Innovista (Learn Easy)
 - Python Programming – Innovista (Learn Easy)
 - HELM Kubernetes Packaging Manager – Udemy
-

Experience

AWS Cloud Club Captain

- Founded and scaled AWS Cloud Club, growing a student community around cloud technologies
 - Organized workshops and sessions on cloud fundamentals, deployment, and AWS services
 - Led initiatives to promote hands-on learning in cloud computing
-

Computer Science Teacher - Parasole Academy

- Delivered structured instruction in computer science, focusing on programming and technical foundations
 - Guided students in understanding computing concepts and logical problem-solving
-

Projects

EcoGuard Pro – AI Environmental Monitoring System

Python, Machine Learning, Cloud Deployment

- Developed AI-powered environmental monitoring dashboard for air, water, and noise analysis
 - Designed ML model to learn from sensor data and enable predictive insights
 - Built cloud-deployed system capable of real-time monitoring and alert generation
 - Engineered system architecture to support IoT sensor integration and scalable data processing
-

Frontline Worker Support AI – Multi-Agent Coordination System

Python, Rule-Based AI, Google Cloud

- Developed a multi-agent prototype system for real-time coordination between emergency responders and users
 - Implemented rule-based decision engine for symptom analysis and smart service routing
 - Deployed cloud-based solution using Google Cloud Functions and Firestore
 - Designed workflow automation to reduce response delays in emergency scenarios
-

Business Task Automation System

Python, LLM Integration, Microservices

- Building AI-powered automation platform integrating LLMs for workflow optimization
 - Developed microservices-based architecture for task automation across communication and management tools
 - Integrated sentiment analysis and text classification for intelligent decision-making
 - Designed scalable system architecture for multi-domain automation (ongoing development)
-

Quizzzy – AI-Based Test Generation System

Python, AI, Backend Systems

- Developed dynamic test generation system using AI for automated quiz creation
 - Implemented auto-evaluation and report generation for student performance analysis
 - Designed classroom management features for teachers to manage students and assessments
-

Titanic Survival Prediction Model

Python, Scikit-learn

- Built machine learning model using Logistic Regression to predict passenger survival
 - Performed data preprocessing and feature engineering on a structured dataset
 - Achieved ~80% prediction accuracy
-

Cafe Sales Data Analysis

Python, Pandas, Data Visualization

- Conducted exploratory data analysis on sales dataset to identify trends and top-performing items
 - Performed data cleaning and visualization to derive actionable business insights
-

Competitions & Hackathons

Kaspersky CTF 2025 - Cybersecurity Competition

Ranked **80th** place in Turkey and the Middle East Regional League.

Competed in a prestigious Capture The Flag cybersecurity competition.

Solved complex challenges in web exploitation, reverse engineering, digital forensics, and cryptography.

Ignite Coding Competition - National Programming Contest

Ranked Top **50** of the Online Phase.

Participated in Pakistan's premier coding competition focusing on algorithmic problem-solving.

Tackled complex computational problems involving dynamic programming, optimization, and graph theory.

Collaborated in a team of 3 to solve advanced data structure challenges using efficient algorithms.

Bolt Hackathon - Innovation Challenge

Although not ranked, the project was recognized by the professor as **outperforming** certain winning entries in terms of usability and feature set.

Developed EcoGuard Pro as a solo project, showcasing full-stack development and IoT integration skills.

Demonstrated the ability to create complete solutions from concept to deployment within time constraints.

Kiro Vibe Coding Hackathon

Developed a Business Task Automation Platform as a solo participant, showcasing end-to-end design, coding, and deployment skills.

Built an AI-powered workflow automation system with microservices architecture, integrating text classification, sentiment analysis, and multi-domain task automation.

Implemented scalable solutions using React, Node.js, Python, Docker, and Kubernetes, enabling intelligent automation across admin, communication, HR, and analytics domains.

Innovista National Agentic AI Hackathon

Developed **Frontline Worker Support AI**, a multi-agent system for real-time emergency coordination (symptom analysis, smart routing, automated scheduling).

Designed and deployed a **cloud-based prototype** using Google Cloud Functions, Firestore, and AI-driven decision engines.

Participated **solo**, presenting and demoing the full project on stage — showcasing end-to-end design, development, and deployment skills.

Skills

Programming Languages: Python, C++

Cloud Platforms: AWS, Microsoft Azure, Google Cloud Platform

Data Analysis: Matplotlib, Data Visualization, Statistical Analysis, Exploratory Data Analysis (EDA)

Coding Tools: GitHub Copilot, Gemini, Bolt, Kiro, Lovable, Replit

Development Tools: Git, Docker, Linux, Kubernetes

Education

- **Bachelor of Computer Science**

Nov 2023 – Nov 27 (Expected)

CGPA: 3.38

Relevant coursework: Programming Fundamentals, OOP, DSA, Information Security, Database Management System
